OBJECTIVE

Undergraduate Bachelor of Engineering in Information Science Engineering student with a strong foundation in data structures, algorithms, and frontend development. Completed coursework and projects in web development and AI-driven applications. Eager to leverage analytical and innovative abilities to build impactful software solutions and drive real-world problem solving in a dynamic tech environment.

EDUCATION

Bachelors of Information Science, Nitte Meenakshi Institute of Technology Expected 2027

CGPA: 9.21 (5 semesters)

Relevant Coursework: Data Structures, Computer Networks, Unix Shell Programming, OS and DBMS.

Grade 12, Kendriya Vidyalaya Jaisalmer

2022

Percentage - 90%

SKILLS

Technical Skills	HTML, CSS, JavaScript, React JS, C/C++, SQL, Python, Linux, APIs, Websocket
Soft Skills	Oration, Collaboration, Leadership, Communication
Competitive programming	Codeforces - Candidate Master, Leetcode - 1800, Over 500+ questions solved

EXPERIENCE

Frontend Developer Intern

June 2025 - Aug 2025

Incerto Technologies

Bengaluru, India

- Architected and implemented critical observability features that drove a 6x increase in daily client usage.
- Led pivotal UI/UX enhancements and applied technical troubleshooting to resolve complex production bugs, significantly improving the product's usability, performance, and overall stability.
- Worked on software development of the Context Engine feature, enabling users to add context to prompts for database problem solving, using React, Jotai, and WebSocket.
- Demonstrated strong collaboration by working closely with cross-functional team members to deliver features rapidly and reliably, while applying analytical skills to evaluate user feedback and technical requirements, resulting in the design of intuitive, user-friendly features.

PROJECTS

Verdicto: Agentic Multi-Agent Legal AI System Architected and designed a scalable Python-based agentic AI system for legal case analysis, implementing a custom scheduler for dynamic multi-agent orchestration and iterative workflows. Built modular agent pipelines and backend services using FastAPI, enabling adaptive decision-making, explainability, and efficient handling of complex reasoning tasks.

Faculty Development Tracker System Built a full-stack Faculty Development Tracking System (FDTS) for 500+ faculty across 10+ departments, automating end-to-end FDP submission, approvals, document handling, and delivering real-time data analysis insights. ([Try it here](#))

Spendora: Wallet Persona Developed a full-stack app leveraging artificial intelligence to transform Ethereum wallets into AI-driven personas and financial insights, winning 1st place in Decode Select S01, a national-level online bounty hackathon. ([Try it here](#))

EXTRA-CURRICULAR ACTIVITIES

- Organised many tech events and hackathons being a Tech team member for Google Developer Groups - NMIT, built the event websites and managed the technical rounds for multiple hackathons
